Subject: Microsoft Settlement

I would just like to say that I have read about the proposed settlement, and I am not in favor of it in its current state.

Please consider this a vote against the current settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors, yet unfavorable to Microsoft.

I believe Microsoft has hurt the worlds software market, and should be split into Operating systems, and Middleware (Office, SQL server etc)

I also believe Internet Explorer should be open sourced, As It destroyed Netscape's browser illegally.

I also believe 'ALL' the API's and protocols that Microsoft's software uses between its client and server should be documented and published. So other operating system can be clients and servers. i.e. Sun's Solaris, Red Hat Linux.

I also think that the latest version of Java should be bundle with the operating system, As they illegally tried to brake Java as a standard.

Also they should be fined in the 10's of billions, and that cash used for a worthy cause. I would love to see that the money was used to find a cure to cancer.

Regards
